INTRODUCTION

The favourable reception which has been given to the preceding edition of this catalogue published by our predecessors, the Traders and Growers' Union, tempts us to distribute the present one to our customers in the hope that it satisfies a real want.

Fortunately, it is possible to grow in the Nile Valley most of the productions of cooler climates. Knowledge of local conditions is, of course, necessary to avoid experiments that must end in disappointment and we flatter ourselves that we can give our customers the advice essential to the successful cultivation of flowers and vegetables in Egypt.

Lovers of flowers who have experience of more temperate climates have their sentiments touched by the memory of familiar flowers and many are the European species which can be produced in Egypt.

We hereby assure our customers that our seeds are procured from the best European and Egyptian Cultivators.

We would, furthermore, point out that we have always in stock a good range of Garden Implements from which we shall be glad to satisfy our customers' requirements.

In conclusion, we would bring to the notice of the public that we are importers and merchants of fruit and produce. We are in close touch with the best growers in this Country, in Europe, America and the Far East, and we sell, in our shop in Opera Square, the best quality only, at prices ruling in the Market. Visitors to our shop will often find fruits unobtainable elsewhere, such as Pineapples, Pawpaws, Kaki, Custard-Apples, etc., It is only through our close relations with the actual growers that we can afford to sell at prices which defy competition.

Up to 350 grammes gross weight, seeds can be sent per Sample Post. Up to 5 Kilos per Parcels Post. Bulky packages will be sent by Passenger or Goods train as requested.

FLOWER SEED.

FLOWER seed should be sown in boxes or pans provided the drainage is good, i.e. if an earthenware or iron pan is used it should have plenty of holes at the bottom to let the water through. Do not sow thickly as the young plants would kill each other. The boxes should be kept in comparative shade and watered twice a day either with a fine rose or by pouring water gently over the edge of the pan. When the seedlings have four leaves transplant them each into one pot. When the plants are strong enough, plant out in their definite place in the open. They should then be watered daily at first and at least once a week later.

Seed can always be sown in drills in their definite place. They should be thinned down to a normal number when they come up.
